

To whom it might concern,

I am writing to recommend Metin Karakus. He worked with us at Staykeepers.com as a Data Engineer and reported to me in my position as Chief Technology Officer (CTO).

As an employee, Metin Karakus was always proactive and he never left a job unfinished. I would strongly recommend Metin for his ability to grasp a complex technical problem and to break it down to digestible parts. Staykeepers has built a cutting-edge data engineering pipeline with the latest technology data engineering tools providing data single source of truth, consistency and reliability solved in our GBQ datawarehouse. Metin has contributed to the data engineering team by developing latest tech solution such as headless BI and centralising dbt measures that provide single source of truth data with minimum company cost, for example. We have reduced ~10x GBQ monthly cost due to optimising sql queries and datawarehouse transformations.

I've always put a premium on transparent communication among my team members and Metin Karakus never failed to deliver.

Metin Karakus is a delight to work with and I wouldn't hesitate to hire him again.

Should you have any further questions about him, feel free to reach me.
